West Nile "Perfect Storm 2" (continued)

By the beginning of August, under the direction of several county health departments and municipalities CMC had initiated and completed large-scale Emergency Public Health Adult Mosquito Spray Applications with in numerous Northern Front Range communities. In a 7 day period from July 17th through July 24th, CMC sprayed nearly 4,800 miles of streets and roadways in Larimer County, Loveland, Fort Collins, Boulder County, Longmont, Weld County, Greeley, Evans, Johnstown, Milliken and the City & County of Broomfield. These applications were performed following CDC recommendations with 2 rounds of spraying back-to-back 3 days apart.

Excellent control results were seen in most areas and by the second week of August dramatic reductions in the *Culex* Vector Indices were evident in all municipalities that performed Emergency Spray Applications. Subsequent data has begun to show a correlated decline in human disease in these areas as well. This data is certainly preliminary and won't be able to be fully analyzed until the season is passed and all data has been collected. But early results are quite promising.

Unfortunately the weather continued to present conditions ripe for not only floodwater annoyance mosquito development but continued rapid development of *Culex* disease vector populations. This lull then re-occurrence of *Culex* mosquitoes caused the Vector Index to jump again in some areas by mid-August necessitating a second round of emergency spray applications. This was particularly evident in Loveland and Fort Collins and surrounding Larimer County areas.

The virus also continued to spread into newer areas and Vector Indices in Adams County also prompted Tri-County Health Department to recommend some limited emergency spray applications in the Cities of Thornton and Northglenn. Over 350 miles was sprayed by Colorado Mosquito Control in these cities during the period August 21-25.

Human West Nile Virus Infections: Colorado, 2007

COLORADO	182	20	14	216	3

Counties not listed have no verified human cases of WNV

2007 Boulder County Cooperating Municipalities & Other Entities:

Boulder County
MCD
City of Lafayette
City of Longmont
City of Louisville
Town of Superior
Boulder County Recycling Center

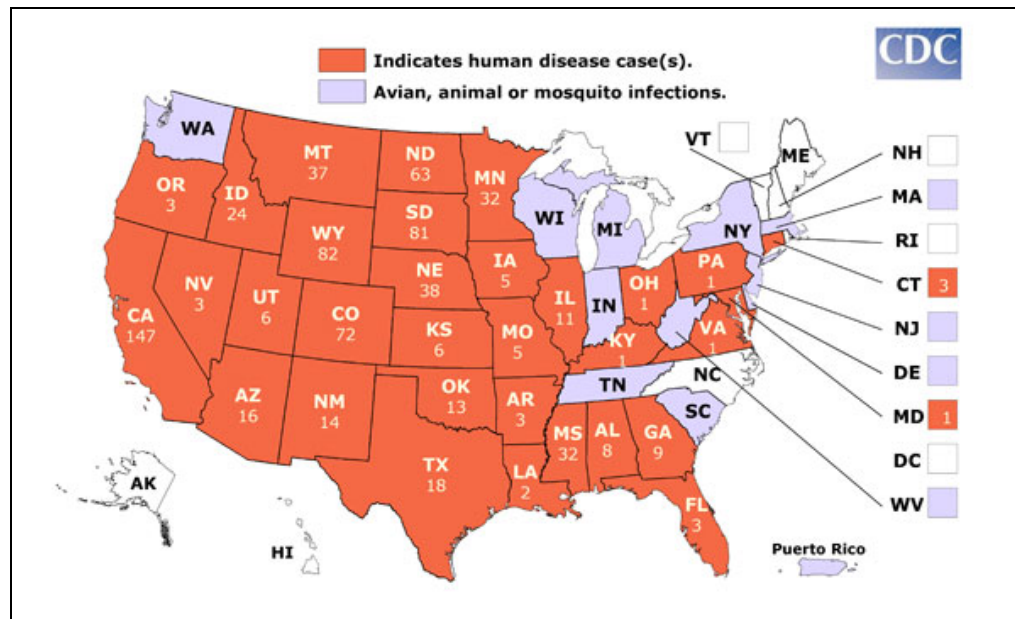

Wear Your Repellent!

- CDC recently came out with new repellent recommendations, visit our website for a link & more information.

- Studies have shown that most human cases of WNV were preventable. Most people infected did not take precautions such as wearing long sleeves and using repellents.

- The most effective repellents contain 10%-35% DEET (N,N-diethyl-meta-toluamide).

- DEET in high concentrations, above 50%, provides no additional protection

As of August 28th, CDC reports 741 human cases from the states show in orange above. 21 human deaths have occurred to date. Please note that Colorado is reporting 216 cases and CDC only has 72 listed for Colorado.

Larval and Adult Control Operations

Heavy Rain, Hot Weather Continue to Keep Aedes and Culex Mosquito Populations at Levels Well Above Normal

As many sites were drying up, heavy thunderstorms in the 2nd half of the August refilled many mosquito breeding sites again. Hot temperatures consistently in the high 90's have kept a much higher than normal percentage of sites active and rapidly producing *Culex* mosquitoes. And now with the flooding and refilling of sites we continue to see floodwater *Aedes* species mosquitoes well above normal for this time of year.

Between the hot weather racing larval mosquitoes through their development stages, normal surveillance and adult control operations and continued public health emergency spray applications, CMC has been pushed into over-drive for the longest period in recent history.

Even though we are entering September when mosquitoes will normally begin a rapid decline, we will continue to battle both larval and adult mosquitoes for the foreseeable future.

Please see the attached data summaries and your Dashboard for more information.

Interactive Data Dashboards Online

Your monthly data summaries are attached as always, but remember that the most up-to-date data on your program is now on-line on your CMC "exclusive" Interactive Data Dashboard!

Visit your Dashboard now at the following web address:

<http://www.comosquitocontrol.com/boulderco.html>

Please make sure that you have the latest Adobe Flash Player installed on your computer. You can download the update free at:

<http://www.adobe.com/shockwave/download>

Wear your repellent!
It only takes one mosquito bite to get West Nile!
